BTC Morning Options Note

Base case: Net gamma is fragile. Expect a more directional realized-volatility session rather than a simple pin day.

Alternative case: If price accepts above 74,000, the heavy call crowding around 75,000 and 80,000 can turn the move into a more momentum-driven upside extension.

Invalidation level: 68,000A sustained break below 67,000 and 60,000 would expose negative-gamma pockets in that zone.
