BTC Morning Options Note

Base case: Net gamma is fragile. Expect a more directional realized-volatility session rather than a simple pin day.

Alternative case: If price accepts above 74,000, the heavy call crowding around 75,000 and 80,000 can turn the move into a more momentum-driven upside extension.

Invalidation level: 68,000A sustained break below 67,000 and 60,000 would expose negative-gamma pockets in that zone.

Quick Summary

- Main setup for today: price is more likely to remain controlled inside 68,000-74,000.
- On the upside, 75,000 and 80,000 stand out as both crowded and important call-heavy zones.
- On the downside, 67,000 and 60,000 are the levels most likely to change the behavior of the session if broken.
- Short-dated risk is still being added, which shows live interest into tomorrow's session.

Today's Playbook

- Base case: 68,000-74,000 icinde pin/range. Ilk beklenen davranis mean reversion and 72,000.
- Bull case: 75,000 acceptance above opens a test toward 80,000 seviyesine uzayabilir. Temiz trend icin yeni call eklenmesi and flow tonunun iyilesmesi lazim.
- Bear case: 68,000 acceptance below should accelerate downside hedge flows; 67,000 is the next acceleration zone.

Yesterday vs Today:

Spot -2,965 | Net gamma -2.460 | Ertesi gun OI +65.9mn USD

KEY LEVELS + TAKEAWAYS

Gamma is fragile/negative. MM hedging is more likely to amplify moves than suppress them.

Balance: 72,000 (weak)

UPSIDE TEST: 74,000 -> 75,000 -> 80,000

Do not trust the first rally impulse; clean acceptance requires at least 75,000 to hold above.

DOWNSIDE TEST: 68,000 -> 67,000

68,000 below increases hedge pressure; the real acceleration risk sits near 67,000.

ACCEPT ABOVE
Spot 75,000 ustunde kalir and call akisi desteklerse yukari test aktif.

REJECT ABOVE
74,000 rejects, do not trust the rally; range logic is still in control.

ACCEPT BELOW
68,000 below should increase downside hedge flow.

REJECT BELOW
68,000 loses and is quickly reclaimed, read it as a stop-hunt / return-to-range move.

Dealer Inventory Proxy

Net tone: MM neutral to mixed (+0.04)

Bu chart gercek MM inventory degil; gamma, flow, skew, IV-RV and strategy tape uzerinden uretilen bir proxy skorudur.

Inventory Trend

Trigger Map

Squeeze trigger: 75,000

Breakout confirm: 80,000

Yerel arsiv buyudukce bu grafik MM/dealer tonunun zaman icinde daha net izlenmesini saglar.

Breakdown trigger: 68,000

Acceleration trigger: 67,000

Reject above: 74,000

Reject below: 68,000

- Accept above 75,000: spot bu seviye ustunde kalir and yeni call akisiyla desteklenirse yukari test aktif olur.
- Reject above 74,000: fiyat bu bolgeyi sadece igneleyip geri donerse ralliye guvenme; pin/range mantigi calisiyor demektir.
- Accept below 68,000: spot bu seviye altinda kalirsa downside hedge akisi kuvvetlenir and 67,000 ikinci hedef olur.
- Reject below 68,000: fiyat altina sarkip hizla geri aliniyorsa asagi kirilim degil stop-hunt / range return okunmali.

Morning Desk Note

Coming into today, the options market is not pricing a one-way breakout. It is pricing control first, then selective directional expansion. The key point is that dealer gamma remains positive, which keeps spot inside 68,000-74,000 and raises the odds that sharp intraday expansions are dampened by hedging flow as long as spot remains in that band. In other words, the opening base case is not a trend day but a pin/range day.

The center of that range read sits at 72,000. because both gamma magnets and strike-level open interest tend to pull spot back toward that axis. On the upside, en kalabalik call cepleri 75,000 and 80,000; and those levels can act as resistance as much as targets on first test. On the downside, ise 67,000 and 60,000 are regime-shift levels. If spot accepts below them, the options market can flip from absorbing the move to amplifying it.

The vol side is more nuanced. Front ATM IV is is 49.49, while back-end ATM IV is 54.97 and term slope -5.48. That curve shape says risk is being distributed further out the curve. More importantly, 7-day realized vol is 72.28 while the front-IV gap is -22.79. That means options premium is lagging spot realized movement; this gap matters for deciding whether to fade vol or chase it intraday.

Skew and smile verisi halen savunmaci bir alt ton tasiyor. Front 25d risk reversal -7.11, 10d risk reversal -14.00 and 25d butterfly 0.94. That combination says the market is not in a carefree upside chase; downside tail risk is still being priced. That does not automatically create a bearish tape; it simply says any upside risk-taking is still being done with protection.

Akis and strategy tape bu resmi tamamliyor. Flow score -4 and baskin ton defensive / downside hedge akisi. Strategy tarafinda one cikan grup constructive. The desk message is that participants are not merely carrying old positions; they are actively building new risk. Eger yapici call/short put yapilari savunmaci put taleplerini dengeliyorsa piyasa yukariyi tamamen reddetmiyor; ancak short call, capped yapilar veya agir hedge akisi artiyorsa yukari hareketin kalitesi weak kaliyor.

Operationally, today's first scenario is 68,000-74,000 with controlled pricing and a center around 72,000. If there is upside extension, the market should first test 75,000 and then 80,000 test edilir, fakat bunun trend gunune donusmesi icin bu seviyelerde kabul and yeni call eklenmesi gorulmeli. On the downside, 68,000 alti sadece teknik weaklik degil, opsiyon rejim degisimi anlamina gelir; orada hedge akisinin hizi artar and spot beklenenden daha hizli asagi tasinabilir.

In short, the desk note for today is this: the market is not in a chaotic break, but in a controlled price-discovery phase. Dealerlar spotu sabitlemeye calisiyor, vol market riski tamamen dusurmuyor, strateji tape ise yon yerine secici and korunmali risk alindigini anlatiyor. That is why the first morning read is range/pin; the real intraday question is which direction the options market will add momentum to once that balance breaks.

APPROX SPOT	PIN BAND	NEXT-DAY EXPIRY	NEXT-DAY OI
68,253	68,000 - 74,000	08MAR26	$265,019,394

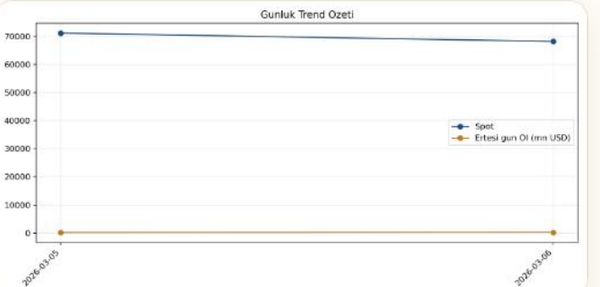
24H OI ADDED	CALL / PUT NOTIONAL	FRONT ATM IV	7D REALIZED VOL
$198,510,125	1.43x	49.49	72.28

IV - RV SPREAD
-22.79

Yesterday vs Today

- Spot dunden bugune -2,965 degisti.
- ATM spot IV degisimi +0.89 puan; net gamma degisimi -2.460.
- Ertesi gun vadesindeki acik pozisyon +65.9 milyon USD degisti.

Daily Trend



Bu grafik yerel arsivden beslenir. Ilk gunlerde kisitli olur; her sabah veri geldikce yorum kalitesi artar.

Dealer Read

- Dealer tarafinda yonlu devam hareketini bastiracak kadar pozitif gamma yok.
- En yogun pozitif GEX dugumleri 75,000, 72,000, 74,000 seviyelerinde; bu alanlar ani squeeze'ten cok yukari yonlu miknatis etkisi yaratir.
- Asagi yonlu en hassas hedge cepleri 67,000 and 60,000 seviyelerinde kaliyor; bu bolgenin kirilmasi hedge talebini hizlandirabilir.

Crowding Read

- Call notional hala put notional'in 1.43 kati, open interest adedi de call lehine 1.43 kat. Bu panic hedge degil, yapici bir konumlanma.
- Spota yakin en buyuk call yigilmalari 75,000, 80,000, 70,000; en buyuk put yigilmalari ise 60,000, 55,000, 70,000.
- Ertesi gun vadesi olan 08MAR26 tum gorunen expiry OI'nin yalnizca 0.8%'i kadar; bu nedenle spot dogrudan kalabalik strike'lara gitmedikce tek basina tum bandi suruklemesi zor.

What The Market Is Pricing

- Piyasa crash paniginden cok duzenli bir asagi yon korumasi fiyatliyor: 25SEP26 vol baglaminda 25-delta risk reversal -4.50, 25-delta skew ise 8.82.
- ATM spot IV 51.06 civarinda; riskin ciddiye alindigini gosteriyor ama tek basina duzensizlik sinyali vermiyor.
- Expiry egirisinin on tarafina hala taze risk ekleniyor: ertesi gun vadesine son 24 saatte yaklasik $198,510,125 eklendi.

What The Market May Be Missing

- Spot 68,000 uzerinde kaldigi surece bant cok sert bir asagi kirilim icin hazir gorunmuyor; piyasanin ustunde and etrafinda hala fazla miktarda pozitif gamma birikimi var.
- Ayni anda piyasa temiz bir yukari kirilimi de agresif fiyatlamiyor. 75,000 and 80,000 civarindaki agir call pozisyonlari, spot bu seviyeleri hacimle asmadan chase davranisini sinirlayabilir.
- Daha buyuk gizli risk, 67,000 altinda rejim degisimi yasanmasi; bu bolgede dealer hedging hareketi emmek yerine buyutmeye baslayabilir.

Vol Market Intelligence

- On vade ATM IV (07MAR26) 49.49; while back-end ATM IV is (20MAR26) 54.97. Vol egirisi yukari egimli; piyasa yakin riski degil daha kalici belirsizligi fiyatliyor.
- Front ATM IV, 7 gunluk realized volun 22.79 puan altinda. Spotun son hareketi opsiyon primlerinden daha agresif; underpriced hareket riski var.
- 25d RR -7.11; downside putlar call'lara gore anlamli primli. Bu savunmaci tail hedge talebini gosteriyor.
- 10d RR -14.00 and 25d BF 0.94; bu kombinasyon kisa vadede tail priminin ne kadar yuksek oldugunu gosteriyor.

Front maturity: 13MAR26

Gunluk ATM IV degisimi: +0.01

Haftalik ATM IV degisimi: +4.53

IV and RV Karsilastirmasi
